

Syed Zeeshan Nusrathi

Sr. DevOps Engineer / Sr. Cloud Engineer

Email : syedzeeshanusrathi@gmail.com

Phone: (872) 290-5174

- 6.5+ Years of experience as a DevOps Cloud Engineer/Build and Release Engineer/Site Reliability Engineer application configuration, code compilation, packaging, building, automating, managing and releasing code from one environment to other environment and deploying to servers.
- Skilled in GCP services (Compute Engine, Cloud Load Balancing, Cloud Storage, Stackdriver Monitoring) and AWS (EC2, RDS, S3, CloudFormation) and Azure for deploying and managing cloud services.
- Extensive experience with CI/CD tools like Jenkins and Bamboo, and version control systems including Git and SVN for continuous integration and delivery.
- Proficient in containerization technologies such as Docker (creating images, managing containers) and Kubernetes (pod management, scaling, deployments).
- Experienced in scripting with Python, Shell, Ruby, and Golang for automating tasks and managing infrastructure.
- Expertise in build tools (Maven, Ant), configuration management (Chef, Ansible, Puppet), and deployment processes for Java/J2EE, C++, and web applications.
- Skilled in performance monitoring and troubleshooting using tools like Nagios, Cacti, and Stackdriver, with a track record of optimizing build processes and improving system performance.
- Proficient in containerization and orchestration technologies, including Docker, Kubernetes, and Minikube, enabling the efficient deployment and scaling of containerized applications in diverse environments.
- Extensive experience with Infrastructure as Code (IaC) using Terraform, automating infrastructure provisioning and management across multiple cloud environments for consistency and scalability.
- Strong expertise in configuration management tools such as Ansible, streamlining system configuration, deployment automation, and configuration drift management.
- Proficient in building end-to-end CI/CD pipelines and implementing DevSecOps practices using Jenkins, SonarQube, and other tools to automate code integration, testing, deployment, and security scanning.
- Experienced in utilizing monitoring and observability tools like Grafana, Prometheus, Helm, Git, and Datadog, ensuring proactive system monitoring, performance tuning, and troubleshooting.
- Hands-on experience with web servers such as Nginx and Apache, deploying and maintaining high-availability applications, and ensuring efficient load balancing and traffic management. Additionally, proficient in Linux (Ubuntu/Amazon) and Windows operating systems for diverse deployment environments.

Manulife, Boston, MA
DevOps Cloud Engineer

Jan 2025 – Present

- Automated cloud infrastructure management and deployments using Terraform, Ansible, and CloudFormation for AWS, GCP and Azure including provisioning resources like VPCs, EC2 instances, and RDS, and deploying applications.
- Administered and maintained Adabas/Natural databases in a cloud-based distributed Linux environment, ensuring optimal performance and reliability for critical services.
- Monitored system stability and proactively resolved issues, leveraging best practices to support seamless operation of Adabas/Natural applications.
- Extensive experience with Linux and strong Unix skills, including proficiency in shell scripting for automation and system management.
- Proven expertise in build automation and CI/CD pipelines, leveraging tools like Git, Groovy, Kotlin, Gerrit, Maven/Gradle, Docker, Nexus, Artifactory, and Selenium for streamlined software delivery.

- Solid experience supporting and troubleshooting modern development tools, ensuring optimal performance and developer productivity in fast-paced environments.
- Test-driven development mindset with a focus on automation, enabling consistent testing, validation, and reliability throughout the development lifecycle.
- Hands-on experience with infrastructure automation tools like Terraform, Ansible, Puppet, and Chef, combined with knowledge of Cloud Native principles for scalable deployments.
- Strong background in supporting Java container-based applications, application telemetry implementation, and Agile development methodologies, with active involvement in the DevOps community through open-source contributions.
- Automated infrastructure provisioning for PaaS databases, including Cosmos DB, Azure SQL Database, and Managed Instances, using Infrastructure as Code (IaC) principles.
- Designed and implemented robust automation workflows with Ansible and Terraform, ensuring consistent and scalable database deployment.
- Implemented and managed GitOps workflows using ArgoCD to streamline application deployment and ensure consistency across environments.
- Established and standardized best practices for PaaS database automation, collaborating with database SMEs to align automation standards.
- Configured and optimized CI/CD pipelines using Harness to streamline deployment processes and reduce manual effort.
- Developed efficient automation scripts and solutions using C#, Python, and Java, enhancing provisioning and operational workflows.
- Integrated advanced Azure networking and security configurations to ensure secure and compliant database environments.
- Demonstrated expertise in RHEL OS patching, ensuring systems remain secure and up-to-date by effectively managing patch cycles and troubleshooting issues.
- Skilled in AWS Patch Manager, automating and managing patching tasks for EC2 instances to improve system performance and security compliance.
- Extensive experience with AWS EC2, managing instances at a senior level, including provisioning, configuration, scaling, and troubleshooting in production environments.
- Designed, developed, and executed software solutions with a focus on technical troubleshooting to ensure optimal application performance.
- Proficient in developing Azure-based applications across diverse environments, leveraging Infrastructure as Code (IaC) tools like Terraform for scalable deployment.
- Expertise in Azure DevOps, GitHub, Kafka, and Redis Cache, with a strong understanding of security principles, RESTful APIs, and authentication protocols like OAuth and OpenID Connect.
- Implemented deployment pipelines using Harness, streamlining the release process and enhancing deployment efficiency.
- Delivered robust solutions by integrating advanced Azure capabilities with best practices in application design and troubleshooting.
- Adept at optimizing CI/CD workflows and ensuring secure, scalable, and efficient application deployments across various environments.
- Expert in containerization and orchestration technologies, utilizing Docker, Kubernetes, and Minikube to deploy, scale, and manage containerized applications in cloud and on-prem environments.
- Proficient with Infrastructure as Code (IaC) tools like Terraform, automating the provisioning and management of cloud infrastructure, ensuring consistency and efficiency across environments.
- Skilled in using configuration management tools such as Ansible, enabling automated configuration, deployment, and management of systems, ensuring repeatable and reliable setups.
- Experienced in building and maintaining end-to-end CI/CD pipelines and DevSecOps processes using Jenkins, SonarQube, and other tools, automating the entire software development lifecycle from integration to deployment with integrated security scans.
- Proficient with monitoring and observability tools including Grafana, Prometheus, Helm, Git, and Datadog, ensuring continuous monitoring, performance tuning, and quick detection of issues across environments.
- Hands-on experience with web servers like Nginx and Apache, configuring and managing scalable, high-availability applications while ensuring efficient load balancing and traffic management on both Linux (Ubuntu/Amazon) and Windows platforms.

- Developed and automated CI/CD pipelines using Jenkins, Hudson, and GitHub, including setting up build and test automation jobs and integrating with orchestration and UI layer repositories.
- Configured and optimized performance monitoring tools such as Nagios, Cacti, and CloudWatch, managed data pipelines with Kafka, and ensured high availability and scalability for applications and infrastructure.
- Installed, configured, and maintained WebLogic Server, JBoss Application Servers, Tomcat, and Apache HTTP Server across various versions, managing upgrades and patches for robust application environments.
- Designed and managed Docker containers and Kubernetes clusters, including creating Docker images, orchestrating containers, and implementing scalable deployment solutions for applications.
- Automated configuration management and deployment processes using Chef and Puppet, creating and maintaining reusable cookbooks, manifests, and modules to ensure consistent and efficient infrastructure provisioning, compliance, and application delivery across diverse environments.
- Created and maintained automation scripts using Python, Shell, Perl, and Groovy for infrastructure management, and used tools like Ansible, Chef, and Terraform for configuration management and server provisioning.
- Implemented monitoring and security solutions using tools like Splunk, ELK Stack, and Nessus. Configured Splunk for log management, created dashboards for performance metrics, and used vulnerability scanners to assess and address security risks.
- Experience using Linux/Unix shell scripting, and applied expertise in AWS cloud, Kubernetes, Terraform/Pulumi, Prometheus, OpenTelemetry, Elastic Search, PostgreSQL, and MariaDB/MySQL to support highly available, high-throughput REST APIs.

Smart Pay, Cincinnati, OH
DevOps Cloud Engineer

Jan 2024 – Dec 2024

- Managed AWS, GCP and Azure infrastructure and services including Web Roles, VM Roles, SQL, and Virtual Machine backups, utilizing PowerShell and Portal for administration and maintenance.
- Designed and implemented automation for provisioning Cosmos DB, Azure SQL Database, and Managed Instances using Infrastructure as Code (IaC) tools like Terraform and Ansible.
- Managed and optimized Adabas/Natural databases in a distributed Linux server environment, ensuring high availability and performance for cloud-based applications.
- Proactively monitored and maintained the stability of Adabas systems, implementing best practices to support seamless application operations.
- Streamlined deployment processes by implementing and managing ArgoCD for GitOps-based continuous delivery, ensuring efficient and consistent application rollouts.
- Established and enforced automation standards and best practices for PaaS database deployment, ensuring consistency and scalability across environments.
- Collaborated with database Subject Matter Experts (SMEs) to define and implement database provisioning standards aligned with organizational requirements.
- Integrated and optimized CI/CD pipelines using Harness to streamline database deployment workflows and improve operational efficiency.
- Developed automation solutions leveraging programming languages such as C#, Python, and Java to enhance infrastructure provisioning and management.
- Implemented secure and robust Azure networking and security configurations to support compliant and reliable database operations.
- Led RHEL OS patching efforts, managing patching schedules, automating updates, and ensuring system stability and security across multiple environments.
- Extensive experience utilizing AWS Patch Manager to automate patching workflows, enhancing security compliance and reducing manual intervention.
- Senior-level proficiency in managing AWS EC2 instances, including provisioning, configuring, scaling, and optimizing resources for high availability and performance.
- Designed, developed, and troubleshooted software solutions, ensuring high-quality and efficient application performance.
- Developed Azure-based applications across multiple environments, including Lignum, using Infrastructure as Code (IaC) tools like Terraform for consistent and scalable deployments.

- Demonstrated expertise in Azure DevOps and GitHub for source control, CI/CD pipelines, and collaborative development workflows.
- Integrated Kafka and Redis Cache for efficient message streaming and caching, enhancing system reliability and scalability.
- Applied strong knowledge of security principles, RESTful API design, and authentication frameworks such as OAuth and OpenID Connect to ensure secure application operations.
- Streamlined deployments by setting up and managing pipelines using Harness, optimizing the release cycle and minimizing downtime.
- Expert in containerization and orchestration using Docker, Kubernetes, and Minikube, enabling seamless deployment, scaling, and management of containerized applications across cloud and on-premises environments.
- Proficient in Infrastructure as Code (IaC) with Terraform, automating cloud infrastructure provisioning and management for streamlined, scalable, and consistent environments.
- Experienced with configuration management tools like Ansible, driving automated system configuration, deployment, and ongoing management, ensuring reliability and repeatability.
- Skilled in building and managing end-to-end CI/CD pipelines leveraging Jenkins, SonarQube, and DevSecOps practices to automate software delivery, integrate security checks, and ensure high-quality code.
- Experienced in monitoring and observability using Grafana, Prometheus, Helm, Git, and Datadog, ensuring performance monitoring, proactive issue resolution, and optimizing application reliability and availability.
- Solid expertise in managing web servers such as Nginx and Apache, configuring them for high-traffic applications, load balancing, and efficient traffic handling on Linux (Ubuntu/Amazon) and Windows operating systems.
- Designed and implemented architecture for application migration, including modernizing and remediating applications and participating in MRB meetings for cloud service reviews.
- Created and managed CI/CD pipelines using Terraform, including building infrastructure as code, automating deployments, and managing VSTS build and release pipelines.
- Developed and maintained container orchestration solutions with Kubernetes and OpenShift, including deploying and scaling Kubernetes clusters, managing Docker containers, and creating Helm charts for Kubernetes applications.
- Streamlined infrastructure management by leveraging Chef and Puppet for automated system configuration, continuous integration, and orchestration, reducing manual intervention and enhancing scalability and reliability of deployments.
- Automated infrastructure and deployment processes using Ansible for tasks like machine creation, SQL Server and MySQL installations, ELK stack setup, and integrating Ansible with Jenkins for CI/CD automation.
- Configured and monitored cloud environments with tools Monitor for alerting, Nagios for system performance monitoring, and managed Kafka clusters for data pipelines, including writing Python scripts for GIT administration and JIRA for issue tracking.

Airan
DevOps Cloud Engineer

Sep 2020 – Oct 2022

- Automated cloud infrastructure management and deployments using Terraform, Ansible, and CloudFormation for AWS, GCP and Azure including provisioning resources like VPCs, EC2 instances, and RDS, and deploying applications.
- Managed and orchestrated containerized applications using Docker, Kubernetes, and Minikube, ensuring efficient deployment and scaling across development and production environments.
- Leveraged Terraform for Infrastructure as Code (IaC), automating cloud infrastructure provisioning, and implemented Ansible for configuration management, ensuring consistency and efficiency in system configurations.
- Developed and maintained end-to-end CI/CD pipelines with Jenkins and SonarQube, following DevSecOps best practices to ensure secure, scalable, and automated software delivery.
- Utilized Grafana, Prometheus, Helm, and Datadog for comprehensive monitoring and observability, while configuring and managing Nginx and Apache web servers on both Linux (Ubuntu/Amazon) and Windows platforms.

- Implemented and managed ArgoCD to automate and enhance GitOps workflows, ensuring seamless and reliable application deployments across environments.
- Designed and managed the migration of on-premises applications to Microsoft Azure, including planning, deploying, and configuring cloud resources such as VMs, storage, and network security. Implemented high availability solutions using both Azure Classic and Resource Manager models.
- Developed and automated CI/CD pipelines using Terraform for infrastructure as code for code deployment, and Jenkins for continuous integration and delivery, along with Ansible for configuration management and automated server provisioning.
- Implemented robust configuration management solutions with Chef and Puppet, designing scalable automation scripts and enforcing best practices for environment consistency, system security, and rapid provisioning.
- Developed and maintained infrastructure automation scripts with Ansible, Terraform, and Python.
- Created Ansible playbooks for configuring AWS environments, managing Tomcat servers, and automating infrastructure provisioning. Used Terraform for infrastructure as code and implemented CI/CD pipelines for various environments.
- Built and maintained microservices and RESTful APIs using Spring Boot, Hibernate, and related technologies. Developed, tested, and managed APIs with tools like SOAPUI and POSTMAN, and integrated Kafka for data pipelines and monitoring.
- Implemented and managed container orchestration solutions with Kubernetes and Docker, including creating and managing Kubernetes clusters with Helm, and utilizing Rancher for multi-cluster management. Designed containerized microservices for scalable cloud deployments.
- Monitored and managed infrastructure and applications using tools like Splunk, Grafana, NewRelic, and ELK Stack for log management and performance tracking. Developed dashboards, managed metrics, and ensured system reliability.

Alphalogic Techsys

June 2018 – Aug 2020

Build and Release Engineer

- Managed AWS Azure and GCP infrastructure with Ansible, deploying Red Hat Linux and automating Docker container maintenance.
- Managed CI/CD pipelines using Jenkins and Maven, implemented Puppet for configuration management.
- Configured Prometheus, Grafana, and DataDog for comprehensive monitoring and alerting.
- Developed Chef recipes, IAM policies, and CloudFormation templates for automated system configurations and access control.
- Integrated Helm, Terraform, and MySQL into CI/CD pipelines, optimizing deployments and ensuring scalability.
- Designed and optimized CI/CD pipelines using Jenkins, GitLab CI/CD, Azure DevOps, and GCP Cloud Build, integrating best practices like branching strategies, artifact management, and version control.
- Managed Linux environments (RHEL, CentOS, Ubuntu), implementing security hardening, user access controls, and system performance optimization.
- Automated infrastructure provisioning with Terraform, CloudFormation, and Ansible, enabling scalable and consistent deployments.
- Developed and maintained infrastructure automation scripts with Ansible, Terraform, and Python.
- Integrated AppDynamics and APM tools for performance monitoring, error tracking, and stability improvements.
- Configured Prometheus alerting with Alertmanager for real-time incident response.
- Orchestrated Helm release pipelines for automated deployments, rollbacks, and versioning.
- Developed Bash, Python, and Perl scripts for automation, log analysis, and system monitoring, reducing manual errors and enhancing efficiency.
- Strong communicator, collaborating with cross-functional teams, maintaining technical documentation, and ensuring seamless deployments.

Education

- Bachelors from Osmania University , India
- Master in Computer Science in Cloud Computing, Lewis University, Chicago, IL, USA
